Technical Skills

Languages: Python, JavaScript, Java, SQL

Frameworks & Tools: React, Next.js, Django, Flask, Express, Power Apps, Power Automate

Databases & Others: MySQL, PostgreSQL, SharePoint, Node.js, Git, Docker, XAMPP, HTML, CSS

Experience

App Developer Intern

February 2025 – May 2025

Mabuhay Energy Corporation

BGC, Taguig

- Developed a full-featured internal ticketing system using Power Apps, Power Automate, and SharePoint, implementing user roles, automated email notifications, etc.
- Collaborated with co-interns to develop a Customer Management Portal for the sales team using Microsoft Power Platform. Improved customer data organization, engagement tracking, and team workflow efficiency.
- Contributed to both frontend and backend enhancements of the company's customer and admin portals. Also, co-developed a platform to simplify the onboarding process for prospective customers using Python, Next.js, Tailwind CSS, and various supporting libraries. This included creating new controllers, services, and UI components.

Projects

Ang Tipo Kong Kwento | *React, Python, Flask, Rest API, PostgreSQL, Docker* | [Website](#)

- This was a project for our capstone or thesis. It is a web-based application that generates child-friendly Tagalog stories with the help of a fine-tuned GPT-2 Tagalog language model.
- Built the backend system with Flask and PostgreSQL, implementing secure user authentication, email verification, and data management. Designed REST APIs for seamless communication between the frontend, backend, and AI model. Leveraged Docker for consistent development and deployment.
- Contributed to basic frontend development, such as creating pages for homepage, contact page, etc.

CampusCompass | *Node.js, Typescript, HTML, CSS* | [GitHub](#)

- CampusCompass is an innovative campus map for Technological University of the Philippines - Manila. Its features include GPS-enabled direction routing, optimized algorithms for the shortest route, and location history tracking.
- Collected campus data and plotted it in [MappedIn](#). Contributed to front-end development, enhancing user experience by creating intuitive navigation features that help users to easily navigate the web app.

Markdown to HTML Converter | *HTML, CSS, JavaScript, Node.js with Express* | [GitHub](#)

- Developed a web-based Markdown to HTML converter in collaboration with a colleague who designed and developed the frontend, delivering a seamless application for users.
- Built the backend for the entire conversion process using recursive descent parsing with context-free grammar principles. This includes defining rules, creating a tokenizer, parser, and abstract syntax tree.

Properties Settlement | *HTML, CSS, JavaScript, Python, Django* | [GitHub](#)

- This is a web app that enable users to settle their inheritance or property using the sealed bid method.
- Designed and implemented a dynamic frontend that adjusts to user input, generating containers based on the number of items entered. I also assisted with backend by securely connecting the frontend and backend, ensuring smooth data transmission and integration.

Education

Technological University of the Philippines

Manila, PH

Bachelor of Science in Computer Science

2021 - 2025

- **Courseworks:** Design and Analysis of Algorithms, Software Engineering, Artificial Intelligence, Object-Oriented Programming, Information Management
- Consistent academic achiever with multiple Dean's List and President's List awards.
